

Wireless network access is now available campus wide!

This documentation is designed to configure PC's using Microsoft Windows XP, Vista or Mac operating systems to manage wireless network connectivity. If you use alternative software to manage your wireless network connectivity, consult the documentation provided by the software manufacturer.

Connect to NDM Wireless Network

Windows XP

The majority of Wireless Network cards will automatically connect to any available Wireless Network. If a successful connection is made, the wireless icon will appear in the bottom right of the task bar. If the icon appears you should be connected and can access the Internet.

To manually connect to the Wireless Network:

Click	Start > Control Panel > Network Connections
Right click	Wireless Network Connections Icon
Select	View available Wireless Networks
Select	NDM_ResNet
Click	connect

The Network connection should now be established. If not connected, proceed to the following:

Click	Start > Control Panel > Network Connections
Right click	Wireless Network Connections Icon
Select	Properties
Select	Internet Protocol (TCP/IP)
Click	Properties
Select	Obtain an IP address automatically and Obtain DNS server address automatically
Click	OK for settings to be applied

Windows Vista

Click	Start > Connect To
Select	NDM_ResNet
Click	Connect
Click	Connect Anyway

A window will pop up showing an established connection.

Windows 7

Click	The Wireless icon in the system tray 
Select	NDM_ResNet
Select	Connect Automatically checkbox
Click	Connect and choose "Public Network" when the "Set Network Location" pop-up appears.

A window will pop up showing an established connection.

Mac OS

Click	"Turn AirPort on" icon 
Select	"Turn AirPort On"
Select	NDM_ResNet and click

Status bar will indicate established connection.
